**QUALI-PRO ADDS RIMSULFURON 25 DF TO EXPANDING
PORTFOLIO OF GOLF COURSE PROTECTION PRODUCTS**

Raleigh, NC – August, 2009 — Quali-Pro® announces registration of new Rimsulfuron 25 DF insecticide by the U.S. Environmental Protection Agency (EPA). The active ingredient rimsulfuron is proven highly effective for control of poa and ryegrass on warm season turf.

Applied in spring, Rimsulfuron 25 DF provides the reliable ryegrass control that allows bermudagrass a rapid and complete reestablishment after dormancy. In the fall, prior to overseeding, an application of Rimsulfuron will provide six months of dependable annual bluegrass control.

According to Russ Mitchell, Quali-Pro Marketing and Product Director, “Rimsulfuron 25 DF is ideal for use in spring transition and fall overseeding. With Rimsulfuron, Quali-Pro gives superintendents a active ingredient they know how to use in a formulation that delivers the quality and value that’s critical to golf course management today.”

Rimsulfuron features a flexible formulation that provides outstanding control across entire golf course, along roadsides and other non-crop areas. It's rapidly taken up by shoots and roots and interferes with the synthesis of amino acids in target plants. Rimsulfuron 25 DF is packaged in an easy to use dry flowable formulation and controls more than a dozen weeds and grasses, including annual bluegrass, ryegrass spp, tall fescue, blue-eyed grass and more.

Quali-Pro offers full-service selection of fungicides, herbicides, insecticides and plant growth regulators with proven performance in commercial ornamental and turf markets, all backed by the strength of Makhteshim-Agan Industries, the world's leading manufacturer and distributor of post-patent agrochemicals.
